Obligations by Object Classification .....	4

## **Appropriations Language**

*There is appropriated to the General Services Administration \$300,000,000, to remain available until expended, for the procurement of zero emission and electric passenger motor vehicles and the associated charging infrastructure, notwithstanding 42 U.S.C. 13212(c) and in addition to amounts otherwise available for such purposes: Provided, That amounts available under this heading may be transferred to and merged with appropriations at other Federal agencies, at the discretion of the Administrator, for carrying out the purposes under this heading, including for the procurement of charging infrastructure for the U.S. Postal Service.*

## **Program Description**

The Electric Vehicles Fund (EVF) enables the General Services Administration (GSA) to support the Administration's goal of electrifying the Federal fleet by providing the mechanism for GSA to procure zero emission and electric vehicles and the associated charging infrastructure on behalf of Federal agencies.

## **Program Financing**

The funds appropriated will be transferred and merged with the funds of Federal agencies such as the Acquisition Services Fund and other agency funds at the discretion of the Administrator. The funds will be used to procure zero emission and electric vehicles and the associated charging infrastructure necessary for agencies to operate those zero emission and electric vehicles.

## **Summary of the Request**

The FY 2022 Request provides for a total of \$300 million for the EVF to procure zero emission and electric vehicles (EV) and the associated charging infrastructure to support the Administration's goal of electrifying the Federal fleet. This funding serves as a down payment on a multi-year transformation of the Federal fleet along with additional Administration initiatives to help position the United States as the global leader in electric vehicle manufacturing. Funds for these GSA EV activities are part of a \$600 million request in the President's Budget for EV's and charging infrastructure that is contained within the individual budgets of 18 Federal agencies to begin moving toward a whole-of-government EV approach. This investment will be complemented by Department of Energy funding to provide technical assistance to agencies through the Federal Energy Management Program as GSA helps to build and grow EV infrastructure.

Historically, the upfront acquisition cost of electric vehicles is higher than that of similar conventionally fueled models, which has made it difficult for the Federal fleet to adopt electric vehicles and the associated infrastructure. This funding will allow the Federal Government to modernize its Fleet in a manner that would have a meaningful impact on the environment and transform the United States into a leadership position in electric vehicle manufacturing, creating good jobs across the country. GSA will use the provided funding for the additional upfront cost of electric and zero emission vehicles on behalf of Federal leasing agencies, as well as fund the procurement and installation of the charging infrastructure that is critical for agencies to operate zero emission and electric vehicles.

GSA will transfer and merge a portion of the funding with the Acquisition Services Fund to enable GSA to procure zero emission and electric vehicles to replace fossil-fuel vehicles on an ongoing basis as zero emission and electric vehicles become commercially available. Additionally, GSA may transfer and merge a portion of this appropriation to other Federal agency funds to enable those agencies to procure the charging infrastructure necessary for agencies to operate these zero emission and electric vehicles.

In support of the President's goal of transitioning to a fully EV Federal fleet, the Budget also reflects funding included in the American Jobs Plan for zero emission vehicle acquisitions and necessary vehicle charging infrastructure. This funding will allow the Federal Government to reduce the Federal fleet's impact on the environment as well as help accelerate American industrial capacity to produce clean vehicles and components.
