Re: Goodfellow Federal Center – Bldg. 103 Air Sampling  
Project No. 121244

Dear Ms. Czarnecki:

Thank you for the opportunity to provide the General Services Administration (GSA) with the Resource Conservation and Recovery Act (RCRA) metals air sampling investigation of the above referenced buildings located at the Goodfellow Federal Complex, in St. Louis, Missouri. Burns & McDonnell understands that the purpose of the investigation was to provide sampling data regarding pre-existing conditions noted in the investigation reports previously prepared for the facility. The following report summarizes the sample collection activities and the laboratory analytical results of the samples submitted.

## METHODOLOGY

On June 18, 2020, Emily Ahlemeyer of Burns & McDonnell and Justin Arnold of OCCU-TEC conducted air sampling for the presence of seven (7) of the RCRA metals including arsenic, barium, cadmium, chromium, lead, selenium, and silver. Sampling was conducted in various locations throughout Building 103.

The proposed sampling scheme, the number of samples, sample distribution, and general methodology was developed based on previous investigation methodology and in coordination with the GSA. Sample locations and samples collected from discretionary locations were determined by sampling personnel while on-site.

Air sampling for RCRA metals was collected on 37-millimeter (mm) cassettes with 0.8 micrometer ( $\mu\text{m}$ ) mixed cellulose ester (MCE) filters using powered air sampling pumps in accordance with the National Institute for Occupational Safety and Health (NIOSH) sampling methodology. Samples were collected in a method sufficient to collect a minimum sample volume of 300 liters. Air samples were submitted under chain-of-custody to Environmental Hazards Services, LLC (EHS) in Richmond, Virginia for independence analysis of RCRA metals according to NIOSH method 7300. EHS is accredited under the American Industrial Hygiene Association (AIHA) Industrial Hygiene Laboratory Accreditation Program (IHLAP) program, identification number LAP-100420.

## RESULTS AND DISCUSSION

Results of the air sampling are summarized in the table below by identifying the range of results for Building 103 for each of the seven (7) metals that were sampled. Results indicate that all twenty-seven (27) air samples collected from Building 103 contained concentrations of RCRA metals below the OSHA Permissible Exposure Limit (PEL).

**Table 1. Summary of Air Sampling Results**

| Analyte          | Lowest Concentration <sup>(a)</sup><br>( $\mu\text{g}/\text{m}^3$ ) <sup>(b)</sup> | Highest Concentration <sup>(a)</sup><br>( $\mu\text{g}/\text{m}^3$ ) <sup>(b)</sup> | Permissible Exposure Limit (PEL)<br>( $\mu\text{g}/\text{m}^3$ ) <sup>(b)</sup> |
|------------------|--|---|---|
| Arsenic          | <2.2   | <2.5  | 10  |
| Barium           | <0.41  | <0.48   | 500   |
| Cadmium          | <0.41  | <0.48   | 5   |
| Chromium (Total) | <2.2   | <2.5  | 500   |
| Lead             | <0.41  | 0.54  | 50  |
| Selenium         | <2.2   | <2.5  | 200   |
| Silver           | <0.41  | <0.48   | 10  |

Notes:

- (a) Samples with a “<” sign indicate that the results were below the reportable limit.
- (b)  $\mu\text{g}/\text{m}^3$  = micrograms per cubic meter of air.

GSA may choose to compare results with guidance limits from additional organizations for risk evaluation, including but not limited to the American Conference of Governmental Industrial Hygienists (ACGIH) and/or the World Health Organization (WHO).

A summary table of all sampling results by location is included in Appendix A. The complete laboratory report for the air sampling from EHS is attached in Appendix B. The air sampling professional's Missouri Lead license is included in Appendix C.

## LIMITATIONS

The scope of this assessment was limited as follows. Burns & McDonnell collected samples from a select number of locations in an effort to minimize cost while providing a general overview of the air quality at the site. Sample locations do not encompass every indoor space at the Site. Additionally, samples were only analyzed for a select number of potential contaminants likely to affect the air quality at the site. Burns & McDonnell is not responsible for potential contaminants not identified in this report. This report was prepared for the sole use of GSA.

Burns & McDonnell appreciates the opportunity to work with the General Services Administration on this project. Please contact us if you have any questions regarding this report or if we may be of any additional service.

Sincerely,

Sample Results denoted with a "less than" (<) sign contains less than the reporting limit for each particular metal, based on a 25mL volume. The reporting limit is 0.05ug for Beryllium, 25ug for Aluminum, Calcium, Iron and Zinc, 1.3ug for Arsenic, Chromium, Magnesium, Antimony and Selenium, and 0.25ug for all other metals.

The condition of the samples analyzed was acceptable upon receipt per laboratory protocol unless otherwise noted on this report. Results represent the analysis of samples submitted by the client. Unless otherwise noted, samples are reported without a dry weight correction. Sample location, description, area, volume, etc., was provided by the client. If the report does not contain the result for a field blank, it is due to the fact that the client did not include a field blank with their samples. EHS sample results do not reflect blank correction. This report shall not be reproduced except in full, without the written consent of the Environmental Hazards Service, L.L.C. California Certification #2319 NY ELAP #11714.
